

TC MUD 10 WATER WISE

Summer 2025

<https://www.tcmud10.com/>

DIRECTOR INTRODUCTION – ASSISTANT SECRETARY, CHRIS FOX

I started my term in January 2025 filling an open position formerly occupied by Andi Tasset. As the newest member of the water district's Board of Directors, I look forward to working with our community and Board to provide communication and information about the water, wastewater, and trash collection needs for residents.

I grew up in the Chicago, IL area. My educational career started after earning my degree from Illinois State University, and advanced my career by earning masters degrees from Western Illinois University, and SFA University.

I have taught students in levels K-12 in Oklahoma, Iowa and Texas and university students as an adjunct professor in Iowa and Texas. Besides being a classroom instructor, I was an administrator for 11 years in Texas and provided contract services for Region 4 educational service center.

My husband and I have lived in multiple states and moved to Waterstone full time in 2019. My husband currently works as a Chemical Engineer in Burnett. We have a son, daughter in law and a beautiful granddaughter who currently are living and working abroad.

We love living in this beautiful Lake Travis community and enjoy sailing, spending time with friends, and being engaged in community activities. I am very excited to be working with the impressive TC MUD #10 Board and our partners learning about the water district and the important tasks needed for providing solutions and services for our community residents. I look forward to meeting more of our community members through their POAs/HOAs to assist, communicate and answers questions about the district's and your water needs.

My goal is serving you by working together with our water operators, engineers and other partners to provide current important information to you as our customers.

The Board of Directors meet the first Tuesday of each month, unless otherwise noted. Meetings are open to the public and locations vary each month at a Director's home. Meeting agendas and minutes are available on the website at <https://tcmud10.com/about/meetings>.

Why Native Plants are Great Drought-Tolerant Plants

1. They need less water
2. They require less maintenance. Once established, they grow in most conditions as long as they have light.
3. They attract pollinators such as butterflies and bees.

The best time to plant in Central Texas is between September-December to allow the seedlings enough time to establish a healthy root system before going dormant for winter.

STAGE II

ONCE PER WEEK WATERING RESTRICTIONS IN EFFECT

As a reminder, the District is currently in Stage II of its Drought Contingency Plan (DCP) **which allows a maximum of once per week irrigation on your designated watering day, and during the designated hours.** A letter was also included with statements. See the chart below to identify your day and hours. If you have not done so already, be sure to set your irrigation system to be in compliance with the DCP. Please refer to the District's website for more information and to [view the full DCP](#).

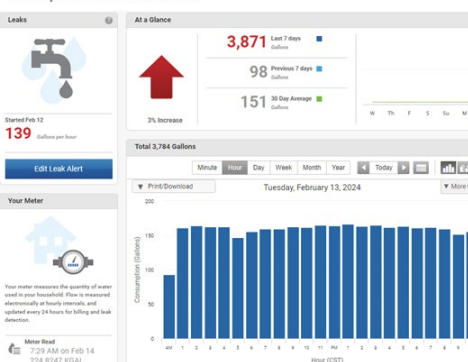

Stage II
ONCE PER WEEK Even Addresses - Fridays only Odd Addresses - Saturdays only HOAs/POAs Sundays only Midnight - 10am and 7pm - Midnight MAXIMUM OF 15 HOURS

In addition, the following non-essential water use may only be permitted on the designated day and during the designated hours listed above.

Non-Essential Water Use:

- Use of water to wash any motor vehicle, motorcycle, boat, trailer, or other vehicle.
- Use of water to wash any sidewalks, walkways, driveways, tennis courts, parking lots, or other hard surfaces.
- Use of water to wash down buildings or structures for purposes other than immediate fire protection.
- Use of water to flush gutters or allow water to accumulate in street.
- Use of water to fill new, or newly repaired pools and other jacuzzi type pools. Customers must haul water trucks. (Automatic systems to top off water are allowed.)
- Use of water in a fountain or pond for aesthetic purposes except where necessary to support aquatic life.
- Failure to repair a leak after a reasonable period from time leak was discovered.

Example of customer leak

Sign Up for EyeOnWater

All single-family homes have electronic water meters. This means every customer can sign up for the EyeOnWater app and view their water usage.

Customers can also set up leak alerts to be emailed Or texted when continuous flow is detected for 24 hours.

It is important to identify leaks early to save water.
