The applicant agrees to follow the rules and regulations of Travis County MUD #10

Service Agreement Continued

- I. PURPOSE. The Travis County MUD No. 10 (the "District") is responsible for protecting the drinking water supply from contamination or pollution which could result from improper plumbing practices. The purpose of this service agreement is to notify each customer of the restrictions which are in place to provide this protection. The District enforces these restrictions to ensure the public health and welfare. Each customer must sign this agreement before the District will begin service. In addition, when service to an existing connection has been suspended or terminated, the District will not re-establish service unless it has a signed copy of this agreement.
- II. RESTRICTIONS. The following unacceptable practices are prohibited by State Regulations.
 - A. No Direct connection between the public drinking water supply and a potential source of contamination is permitted. Potential sources of contamination shall be isolated from the public water system by an air-gap or an appropriate backflow prevention device.
 - B. No cross-connection between the public drinking water supply and private water system is permitted. These potential threats to the public drinking water supply shall be eliminated at the service connection by the installation of an air-gap or a reduced pressure-zone backflow prevention device.
 - C. No connection which allows water to be returned to the public drinking water supply is permitted.
 - D. No pipe or pipe fitting which contains more than 0.25% lead may be used for the installation or repair of plumbing at any connection which provides water for human use.
 - E. No solder or flux which contains more than 0.2% lead can be used for the installation or repair of plumbing at any connection which provides water for human use.
- III. SERVICE AGREEMENT. The following are the terms of the service agreement between Travis County MUD No. 10 (the District) and (the Customer).
 - A. The District will maintain a copy of this agreement as long as the Customer and/or the premises is connected to the District's water system.
 - B. The Customer shall allow his/her property to be inspected for possible cross-connections and other potential plumbing practice. These inspections shall be conducted by the District or its designated agent prior to initiating new water service; when there is reason to believe that cross-connection or other unacceptable plumbing practices exist; or after any major changes to the private plumbing facilities. The inspections shall be conducted during the District's normal business hours.
 - C. The District shall notify the Customer in writing of any cross-connection or other unacceptable plumbing practice which has been identified during the initial inspection or the periodic reinspection.
 - D. The Customer shall immediately correct any unacceptable plumbing practice on his/her premises.

- E. The Customer shall, at his/her expense, properly install, test, and maintain any backflow prevention device required by the District. Copies of all testing and maintenance records shall be provided to the District.
- F. Customer understands and agrees that the District does not guarantee any specific quantity or pressure of water for any purpose whatsoever and that the District is not liable to customer for failure or refusal to furnish any particular amount or pressure of water to Customer at any time.
- G. The Customer shall allow the District access to his/her property to inspect, maintain, and repair the grinder pump. The inspection shall be conducted during the District's normal business hours. The customer shall be notified 24 hours in advance, when possible, and in writing of an inspection or maintenance of the grinder pump. All repairs shall be considered an emergency and customer notification shall not be necessary.

IV. ENFORCEMENT. If the customer fails to comply with the terms of the Service Agreement, the District shall, at its option, either terminate service or properly install, test, and maintain an appropriated backflow prevention device at the service connection. Any expenses associated with the enforcement of this agreement shall be billed to the Customer.

Travis County Municipal Utility District No. 10

Builder Plumbing Guidelines for Grinder Pump Installation

Once the tap fees and application have been received, Travis County MUD No. 10, ("the District"), will provide and install a high head Barnes Razor grinder pump system which includes a tank, the pumping system, a control panel with alarm light, and a secondary jewel alarm.

Unauthorized Plumbing Installations:

- Tanks may not be installed in or under driveways, sidewalks or slabs of any kind.
- The grinder pump tank cannot be more than three (3) feet from the control panel when measured in a horizontal line.
- No retaining walls may be constructed within a five (5) feet radius of the grinder pump except for walls on legal property boundaries or for home foundations.
- No landscaping may be installed within a three (3) feet radius of the grinder pump.
- The grinder pump discharge lines that are installed under a driveway, sidewalk or retaining wall must be sleeved with a minimum of three inch (3") schedule 40 PVC pipe with no bends and must be left uncovered until they have passed inspection. The PVC pipe must not contain other piping in this line. In addition, if the line is located under the driveway, the line must be twelve inches (12") deep to handle the weight of vehicles.
- In case there is an issue with the grinder pump, the District will need quick access to the pumping chamber. Any covering in the area would require excavation at the home owner's expense. The District will not be responsible for replacing any items that are damaged during this excavation. Existing installations approved under the District's rules when the home was built, shall be a grandfathered exception.

Below are steps that must be taken for the proper installation of the grinder pump.

1. The builder's licensed plumber will dig a hole that has a four feet (4') diameter and is five feet (5') deep for the grinder pump tank on the side of the house where the four inch (4") wastewater line exits the home. The wastewater line should be extended to the hole for the pump with a 2-way clean out between the house and tank.
2. The builder's licensed plumber will install a one and one quarter inch (1 1/4") schedule 40 PVC pipe for the wastewater yard line from the tap at the street to the grinder pump location. The discharge line leaving the tank will not exceed a 45° degree bend.
3. The ditch where the completed line is installed must have four inches (4") of pea gravel under the pipe, with four inches (4") of sand or sandy loam on top. All select fill shall be free of any rocks, construction

debris or trash.

4. All piping installed by the builder's licensed plumber must be left uncovered, until inspected by the District's licensed inspector, I.O Inspections (www.ioinspections.com), and the yard line has passed the required inspection.
5. The builder's licensed plumber will pressure test the wastewater yard line. The wastewater yard line must hold 60 psi for 24 hours and must pass inspection by the District's licensed inspector. Once the yard line passes the pressure test, the line must be flushed by the builder's licensed plumber and backfilled with the select backfill, as required per step 3 above.
6. Once the builder has passed the sewer yard line inspection, and the hole required in step 1 above is complete and meets specifications, the builder will need to call SiEnviro at 512-402-1990 and request a grinder pump tank installation. Note: if the hole is filled with water, construction debris, trash, or if the hole is not to the specification required in step 1 above, SiEnviro will not set the grinder pump tank until the area has been cleaned out and is prepared to the specifications in step 1 above.
7. The builder's licensed electrician must provide a double pole 30-amp breaker with four (4) wires at least ten-gauge to a pull tab disconnect mounted to the outside of the house next to grinder pump location. The disconnect must be visible from the tank. From the disconnect, the electrician will install a two foot (2') flex conduit containing the four (4) ten-gauge wires which will provide connection to the control panel. All electrical work must be in accordance with the current National Electrical Code (NEC).
8. The builder's licensed electrician must run a 16-gauge double wire from the grinder pump control panel to the double socket box for the secondary jewel alarm. SiEnviro will install the jewel alarm that must be installed in the home's garage or a common area.
9. Once the electricity has been provided to the grinder pump control panel and the siding is complete on the outside of the home, the builder must call SiEnviro to install the grinder pump and run a "start-up" inspection.
10. SiEnviro will install the pumping system and connect the electricity for the control panel.
11. SiEnviro will fill the tank with water and ensure that a) the pump operates correctly, b) the pump runs within the pump manufacturer's listed electrical parameters. SiEnviro will also verify all alarms and alarm silencing to ensure they work properly.
12. When the installation is complete, SiEnviro will activate the system and install a tamper-proof tab.
13. Existing homes with three (3) wires from the house to the grinder pump control panel must have a fourth wire installed to accommodate the new style panels. The customer is responsible for hire an electrician to add the fourth wire. The District is only responsible for the control panel to the grinder pump system.
